March 2026

Dear Hiring Manager,

I am writing to apply for a **Machine Learning / Software Development Internship**. I am a third-year B.Tech Computer Science student at KIIT with hands-on experience in **machine learning, data analysis, and backend systems**, and a strong interest in building scalable and intelligent applications.

I have worked on multiple ML-driven projects that demonstrate my ability to apply theory to real-world problems. I developed a **Sentiment Analysis Web App** using TF-IDF and SVM, achieving ~65% accuracy and deploying it via FastAPI for real-time predictions. Additionally, I built a **Gold Price Prediction Dashboard**, where I analyzed 40+ years of data and implemented clustering (K-Means, DBSCAN) and an SVM model for predictive insights. These projects strengthened my understanding of **model building, feature engineering, and end-to-end ML deployment**.

I also have strong foundations in algorithms and system design, demonstrated through projects like a **Connect 4 AI agent** using Minimax and a **real-time coding platform backend** supporting 1,000+ users. This combination of ML knowledge and software engineering allows me to build efficient, production-ready systems.

I am eager to contribute my skills while learning more about large-scale systems, AI applications, and real-world deployment challenges.

I have attached my resume for your consideration and would welcome the opportunity to further discuss how I can contribute.

Yours sincerely,

Ayush Kumar
